**NAOYA OHTSUCHI, TOMOHIKO KAWAMURA & MASATSUNE TAKEDA (2014) Redescription of a poorly known epialtid crab *Pugettia pellucens* Rathbun, 1932 (Crustacea: Decapoda: Brachyura: Majoidea) and description of a new species from Sagami Bay, Japan. *Zootaxa*, 3765(6), 557–570.**

On page 559 (lines 6–8) in our recently published article (Ohtsuchi *et al.* 2014), we erroneously listed two non-type specimens (one male and one female), deposited in the collection of the Natural History Museum and Institute, Chiba, Japan (accession number CBM-ZC 11022), in the taxonomic account of both *Pugettia pellucens* Rathbun, 1932 and *P. vulgaris* Ohtsuchi, Kawamura & Takeda, 2014. These specimens should have been referred to *P. vulgaris*. We apologize for this error.

The first author deeply thanks Tomoyuki Komai (Natural History Museum and Institute, Chiba) for pointing out this error and helping preparing the earlier draft of the manuscript.
